

INVESTOR & EXCHANGE WHITE PAPER

Abstract

Crick Coin is a utility-first Solana-based digital asset designed to serve as a global transaction layer for betting, gaming, and high-frequency digital payments. This document is optimized for investors and centralized/decentralized exchanges.

1. Market Opportunity

The global betting and gaming industry processes billions of dollars daily. Crick Coin targets real transaction volume, not speculation, positioning itself as an infrastructure asset.

2. Problem Statement

Existing payment systems are slow, expensive, and restricted across borders. Crypto adoption in betting lacks a purpose-built, scalable payment token.

3. Crick Coin Solution

CRICK enables instant settlements, ultra-low fees, borderless payments, and transparent on-chain accounting using Solana.

4. Technology Stack

Built on Solana leveraging Proof of History, fast finality, and high throughput to support mass transaction demand.

5. Token Utility

• Betting deposits & withdrawals • Affiliate & referral rewards • Operator settlement layer • Peer-to-peer transfers

6. Tokenomics (Investor-Friendly)

Total Supply: Fixed Use of Funds: Liquidity, ecosystem growth, partnerships No inflation-based rewards without real usage

7. Liquidity & Exchange Strategy

Initial DEX liquidity followed by CEX expansion. Liquidity locking and transparent token flow reduce risk for exchanges and investors.

8. Compliance & Risk

CRICK does not represent equity. Platforms integrating CRICK remain responsible for local regulatory compliance.

9. Roadmap

Phase 1: Token launch & liquidity **Phase 2:** Platform integrations **Phase 3:** Exchange listings **Phase 4:** Global scaling

10. Conclusion

Crick Coin is built for real usage, long-term adoption, and sustainable transaction volume, aligning incentives between users, operators, investors, and exchanges.
